US #	User Stories
1	As a user, I want the user to provide their unique username (to keep identity concealed) and age so that we have user information
2	As a user, I want to have a sign up page, so that users have their identity within software
3	As a user, I want to sign in or sign out in my account, so that they can access the app based on their previous history
4	As a developer, I want to have segregated list of books as per the user's age so that it can be accordingly displayed as the reading level of user
5	As a client, I want to display first content as per user's age under suggestion section, so that they can read by themselves
6	As a client, I want to create a database of books, dictionary and user information, so that we can store our books, dictionary and user details like their identity, age, friend list, favorite book list, current book used, current book bookmark, comprehension test results, reading history and NPS score
7	As a client, I want to configure to connect database with the software, so that database dependent functionalities are provided to user
8	As a client, I want users to browse books, so that they can get a book of their interest/choice
9	As a user, I want to open the book upon request/flip the pages of my book so that I can access the book
10	As a client, I want user to open books which they have downloaded, so that they can read them (download in offline)
11	As a client, I want to save the history of the books read by the user so that they can look back whenever they want
12	As a client, I want to save the progress of my current book so that I can resume reading after a while also
13	As a client, I want to track a child's progress, so that the content provided after first book reading should be as per their reading level.
14	As a client, I want to update suggestion section so that the user uses books as per their reading level

15	As a client, I want to make interesting software i.e., by using specific illustrations, adjustable font size and spacing between letters as per age group and using high contrast and off white color so that the reading is not overwhelmed with too much information for the user or user's eyes shouldn't feel strained or sleepy.
16	As a client, I want to have a favourite list option so that while browsing users can save their selected books they want to read later into that list
17	As an admin, I want to a definition of unknown words given in books so that I can load it from the database
18	As a client, user want to see definition of unknown word if tapped on it, so that user may easily know the meaning of it
19	As a client, I want to have a comprehension reading test using voice recognition for users periodically so that based on their reading level software can suggest books under suggestion section and match kids of same level
20	As a client, I want user to send/accept friend request so that they can read together
21	As a client, I want user to send/accept a request to read a specific book with their friend so that they can read together
22	As a client, I want user to have a choice to share and mute/unmute audio/video with their friends while reading book so that they figure out things by themselves
23	As a client, user should be able to rate the books so that we have ratings of the books
25	As a user, I want to connect to wifi to download books, so that my current reading is available anywhere I want.
24	As a admin, I want to secure data of users so that there privacy is maintained
